

The solution to finance your Carbon Dioxide Removal

Nature and technology work together to solve climate finance

We are the first company in the world to offer a way to finance the removal of your annual CO₂ emissions, **without adding an annual cost to your business**, and without passing on the cost to your customers.

Our climate projects have an **ISO 14064 Validation** for using the most efficient CO₂ removal methods in the world.

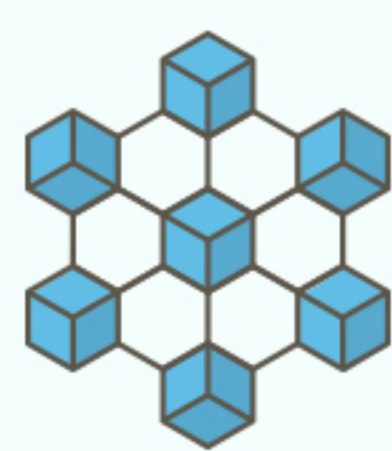

flow earth then digitizes the income streams from our projects and gives these back to you, allowing your business to reach the status of net-zero emissions **without paying annually for carbon credits**.

Our process has an
ISO 14064 Validation
from DNV

Satellite monitoring
of land regeneration and
CO₂ removal and storage

To be secured on the
IBM Hyperledger*
for full transparency

Creating value and beauty with your CO₂ emissions

The most valuable thing you can do with your CO₂ emissions, is to draw them down with **living ecosystems** - both in regenerative agriculture and sustainable forestry.

We establish special C4 grasses, which grow 4 meters tall in 90 days, on marginal land. In addition we plant trees and other crops over time, **to provide food, fibre and fuel** that will satisfy basic needs in society for generations to come.

Raw materials are also refined by technology into much more valuable products, providing the **income streams that finance our climate contracts**.

Our mission is to create
abundance through reciprocity
between society and nature

flow earth embodies
all 17 of the UN Sustainable
Development Goals

**There is finally a way to involve all parts of society
to reverse global warming together, on the scale that is needed**
